the custom built medical working chair

MERCADO
MEDIC

A PEDIATRIC MODULE CHAIR - TREMENDOUS OPPORTUNITIES

Many children with functional disabilities can sit comfortably at a table without extensive support, but they do need a chair with special features. It must be possible to tilt the seat easily, while at the same time providing stable support for the back and feet. REAL 9300/9400 EL PLUS for children, is the module chair where needs dictate design.

REAL 9400 PLUS for children - easy to adjust

A REAL 9400 PLUS with PLUS base enables children with functional disabilities to sit actively at a desk or a table. The height of the seat can easily be adjusted for various table heights, and the brake is operated either by hand or foot. The chair remains securely in the place you want it to be but can easily be moved if required. The chair must also be easy to adapt for the user, which is why it has a modular structure and can be augmented as the child grows.

High quality

The REAL 9400 PLUS for children has a modern, flexible and durable design. It is manufactured at our own facilities in Sweden.

PLUS-base 43 for children

The small, versatile PLUS-base makes movement of the chair easy, in narrow spaces as well.

Options

The REAL 9400 PLUS for children can be customized in many ways. Read our accessories folder for more options.

CHILDREN WITH FUNCTIONAL DISABILITIES ARE ABLE TO SIT ACTIVELY AT A DESK OR A TABLE. DUE TO THE MODULAR STRUCTURE THE CHAIR CAN BE AUGMENTED AS THE CHILD GROWS.

ErgoMedic PLUS – ergonomic design out of the ordinary

To further increase sitting comfort, Mercado Medic has developed the seat system ERGOMEDIC PLUS.

It's very suitable for children with sitting positioning difficulties. The system consists of four inter-acting parts: seat, back, armrest and neck support. The seat has the right form and softness to ensure optimal stability and comfort.

The lower part of the high backrest is shaped to enable the child to sit with pelvic support even when tilted backwards. The high backrest is also available with extra side wedges for extra comfort and positioning (for more information please see our seat system brochure).

Ergonomic hand controls

To be able to adjust the chair in an effortless way, REAL 9400 PLUS for children is equipped with very accessible and ergonomic controls. The controls are marked with symbols for each purpose of use.

New mechanism for seat angle

Our new reinforced mechanism for seat angle has an extended interval (+15°/-23°) and it is adjustable in three varied positions (see picture no. 7 on page 6). This option suits children with extra ordinary needs (e.g. spastic children). With a single grip you can change between the positions.
